PROFESSIONAL SUMMARY

Results-driven SDET with hands-on experience designing, developing, and maintaining scalable automation frameworks for web, API, and mobile platforms. Skilled in end-to-end test automation strategies, embedding quality throughout CI/CD pipelines, and advancing non-functional testing — including performance, regression, and security. Adept at collaborating with developers, architects, DevOps, and product stakeholders to embed testability into designs.

TECHNICAL SKILLS

Languages: Java, C++, JavaScript, Python

Automation: Selenium WebDriver, Appium, TestNG, Maven, WebDriverWait, Page Object Model (POM), Playwright (Basics)

API Testing: Postman, REST API Validation, API Contract Testing, JSON/XML Schema Validation

CI/CD & DevOps: Git, GitHub, GitHub Actions, Jenkins (fundamentals), Agile/Scrum Sprint Workflows

Non-Functional: Performance & Load Testing (JMeter fundamentals), Regression, Smoke, Sanity, End-to-End Testing

Testing Areas: SDLC, STLC, Defect Life Cycle, Test Strategy & Planning, Test Coverage Analysis, Root Cause Analysis

Databases: SQL (queries, joins, validation), MySQL

Frontend: HTML, CSS, React JS

WORK EXPERIENCE

Quality Engineer | [TO THE NEW](#)

June 2025 – Present

Joined project team in Aug 2025 & received Full-Time Conversion in Dec 2025

OTT Platform: Astro SOOKA

- Write and maintain automated test scripts using Java and Selenium for an OTT platform (Astro SOOKA), supporting functional, regression, and smoke testing across release cycles.
- Perform REST API validation using Postman — schema checks, response time assertions, and contract testing — integrated into Agile sprint cycles in close collaboration with developers and product stakeholders.
- Conduct cross-platform testing across mobile devices and Smart TVs, ensuring consistent streaming experience; debug platform-specific issues and collaborate with developers on resolutions.
- Conduct root cause analysis on test failures; implement WebDriverWait/ExpectedConditions for stable execution and generate TestNG reports for stakeholder visibility and audit trails.

Machine Learning Intern | [Cognifyz Technologies](#)

Aug 2024 – Sep 2024

- Engineered a regression-based ML model estimating restaurant aggregate ratings using features including location, cuisine, price range, and user engagement — validated through scaling, cross-validation, and hyperparameter tuning.
- Built a content-based recommendation system using cosine similarity; designed and executed validation tests to confirm model accuracy, preventing data leakage and overfitting.

Cloud Computing Trainee | [ABESEC](#)

Jul 2024 – Aug 2024

- Gained hands-on experience with Azure VM, Azure Blob Storage, Azure Data Factory, and Azure Synapse for building and testing scalable cloud infrastructure.
- Received a Letter of Recommendation ([LOR](#)) for exceptional performance; applied cloud knowledge to later support cloud-native quality engineering practices.

PROJECTS

Swag Labs E-Commerce — End-to-End Automation Framework

Jul 2025 – Aug 2025

- Designed a complete Selenium WebDriver + TestNG + Maven automation framework for the Swag Labs e-commerce platform, following Page Object Model (POM) design pattern for reusability.
- Automated critical user journeys: login validation, product selection, cart management, checkout flow, navigation, and UI element assertions — achieving broad regression coverage.
- Implemented WebDriverWait and ExpectedConditions for robust synchronization; configured external properties files for environment-agnostic execution.
- Generated detailed TestNG execution reports to support test tracking, defect reporting, and stakeholder visibility — demonstrating quality metric ownership.

Early Forest Fire Prediction — ML Research & IEEE Publication

Oct 2023 – Feb 2024

- Built an ML model using Support Vector Machine and Regression techniques to forecast forest fire probability based on environmental and weather features.
- Designed and executed thorough model validation tests (cross-validation, precision/recall, confusion matrix analysis), ensuring prediction reliability and research reproducibility.
- Published findings at ICAC3N 2023 (IEEE), demonstrating capability to communicate quality outcomes to technical stakeholders at a high level.

CERTIFICATIONS

- AWS Academy Cloud Foundation Certificate — Amazon Web Services, 2024
- CISCO: Introduction to Networks — Networking, Security & Automation

PUBLICATIONS

- "Early Forest Fire Prediction using Machine Learning Approaches" — ICAC3N 2023, 5th International Conference on Advance in Computing, Communication Control and Networking. IEEE Published. [Open](#)
- "An Intelligent Mood-based Activity Recommender using Speech Recognition" — ICRAAI 2025, Scopus-Indexed Springer Lecture Notes in Networks and Systems (LNNS). [Open](#)

EDUCATION

B.Tech — Computer Science & Engineering (AIML) | CGPA: 7.43

2021 - 2025

ABES Engineering College, Ghaziabad (AKTU)

Senior Secondary (12th) | 82.83 (All Subjects)

2019 - 2020

CBSE | Dayawati Modi Public School, Raebareli
